

Soil Moisture Monitoring Networks for Satellite and Model Validation: Design and Applications

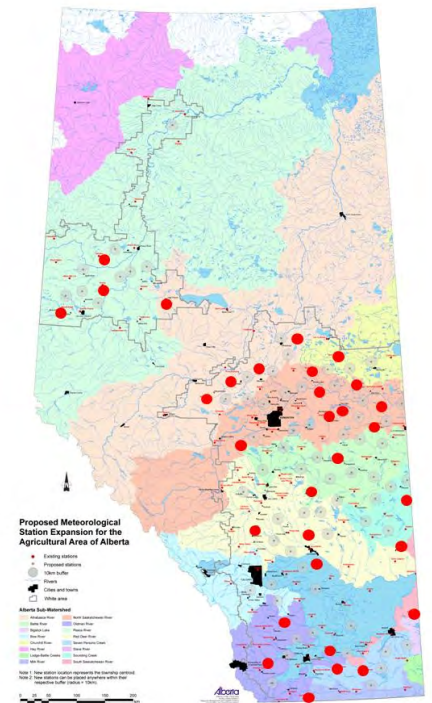

Aaron Berg, Jon Belanger, Catherine Champagne, and Gift Dumedah,

UNIVERSITY
of GUELPH

Outline

- Networks: Locations and Design
- Network design strategy and issues
- Applications of soil moisture estimates

Soil Monitoring Moisture Networks in Canada

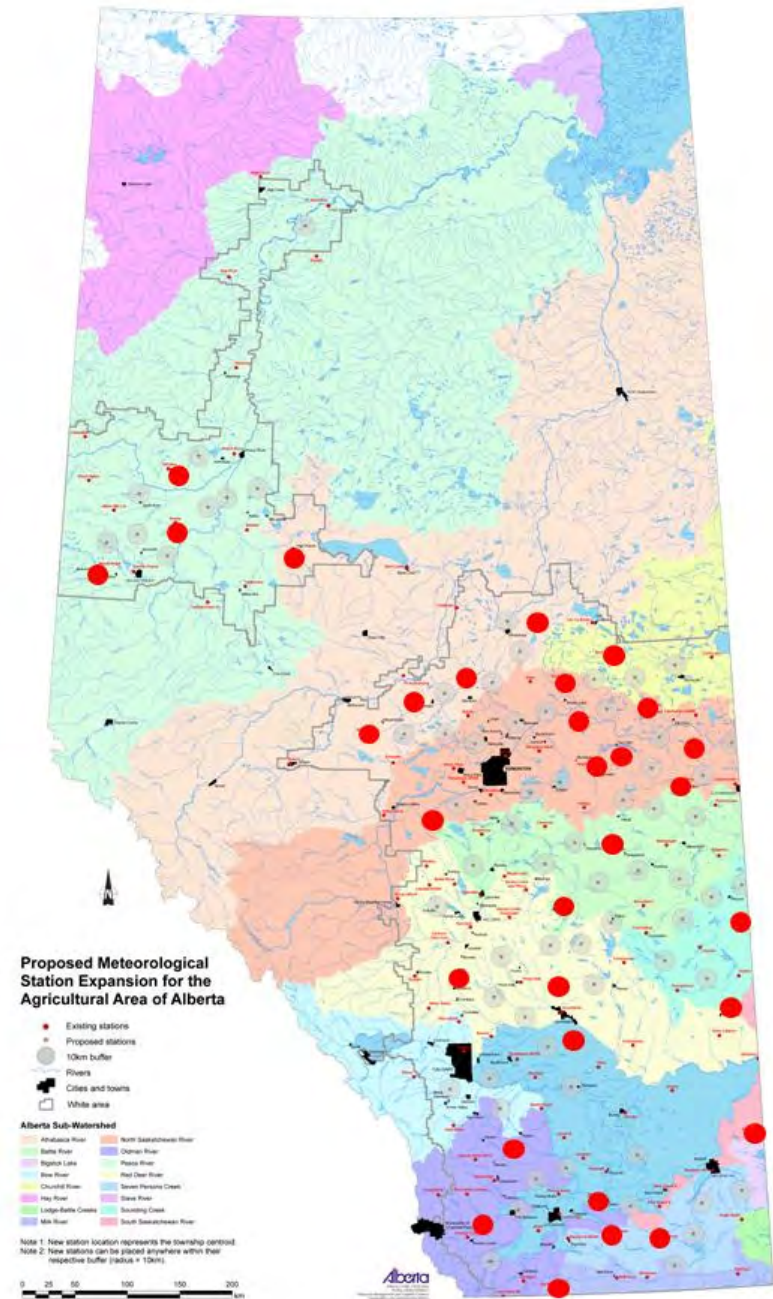

Alberta DroughtNet

Existing Network:

2003 – Present.

- Full meteorological station at each site
- Delta T Theta Probes
- Sampling at 5, 20, 50, and 100cm

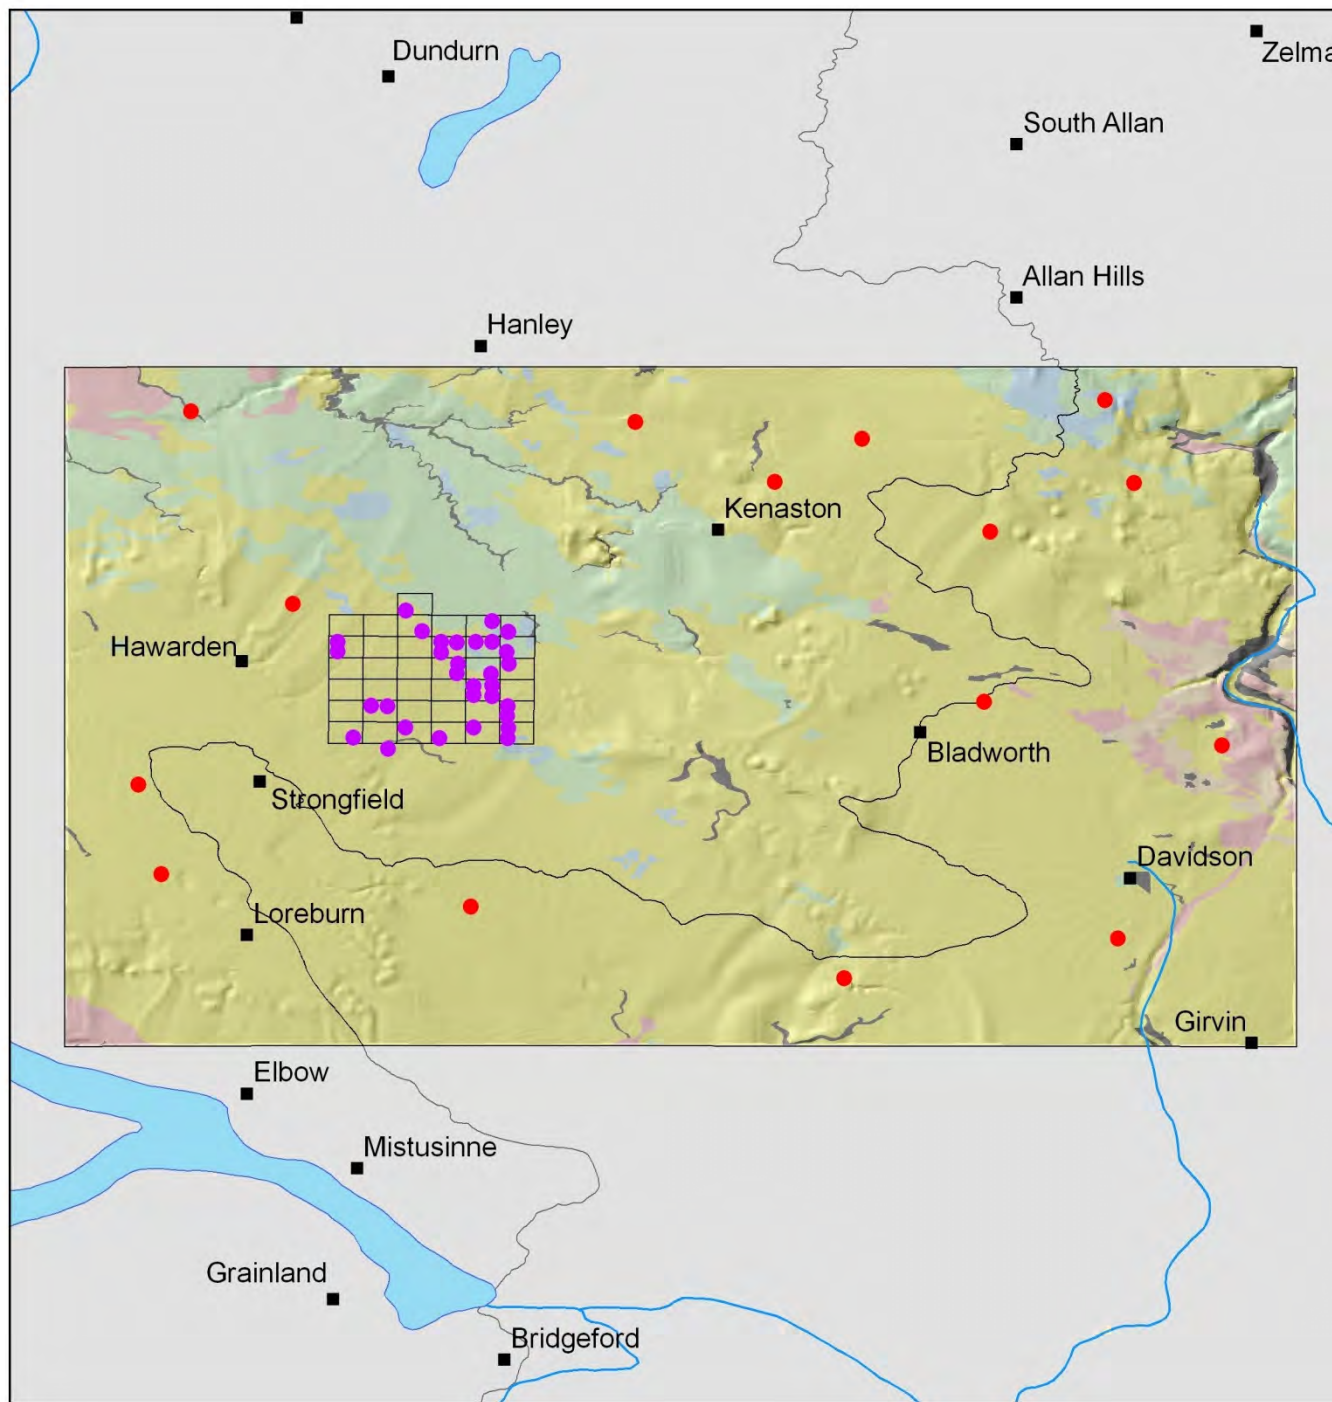

Walker, B.D. and A.E. Howard, 2003.

Ontario and Saskatchewan Paired Soil Moisture Networks

- Two soil moisture monitoring networks 60X60 km resolution
- Sampling at 5, 20 and 50cm depths

- Temporal Frequency :
Hourly
- Variables Observed:
Soil temperature
Soil Moisture
Precipitation

SOIL TEXTURES IN SASKATCHEWAN OBSERVATORY

1:500,000
0 2.5 5 10 15 20 25 Kilometers

Legend

- Guelph Sites
- Environment Canada Sites
- Cities/Towns
- Rivers
- Lakes
- Unclassified
- Clay
- Loam
- Sand Loam
- Clay Loam
- Sand

KEY MAP OF SOUTHERN SASKATCHEWAN

Data Sources:

University of Saskatchewan (2002)
Environment Canada (2007)

SOIL TEXTURES IN ONTARIO OBSERVATORY

1:500,000
0 2.5 5 10 15 20 25 Kilometers

Legend

- Study Sites
- Cities/Towns
- Rivers

Soil Textures

- Organic
- Unclassified
- Loam
- Sand Loam
- Clay Loam
- Silt Loam

KEY MAP OF SOUTHERN ONTARIO

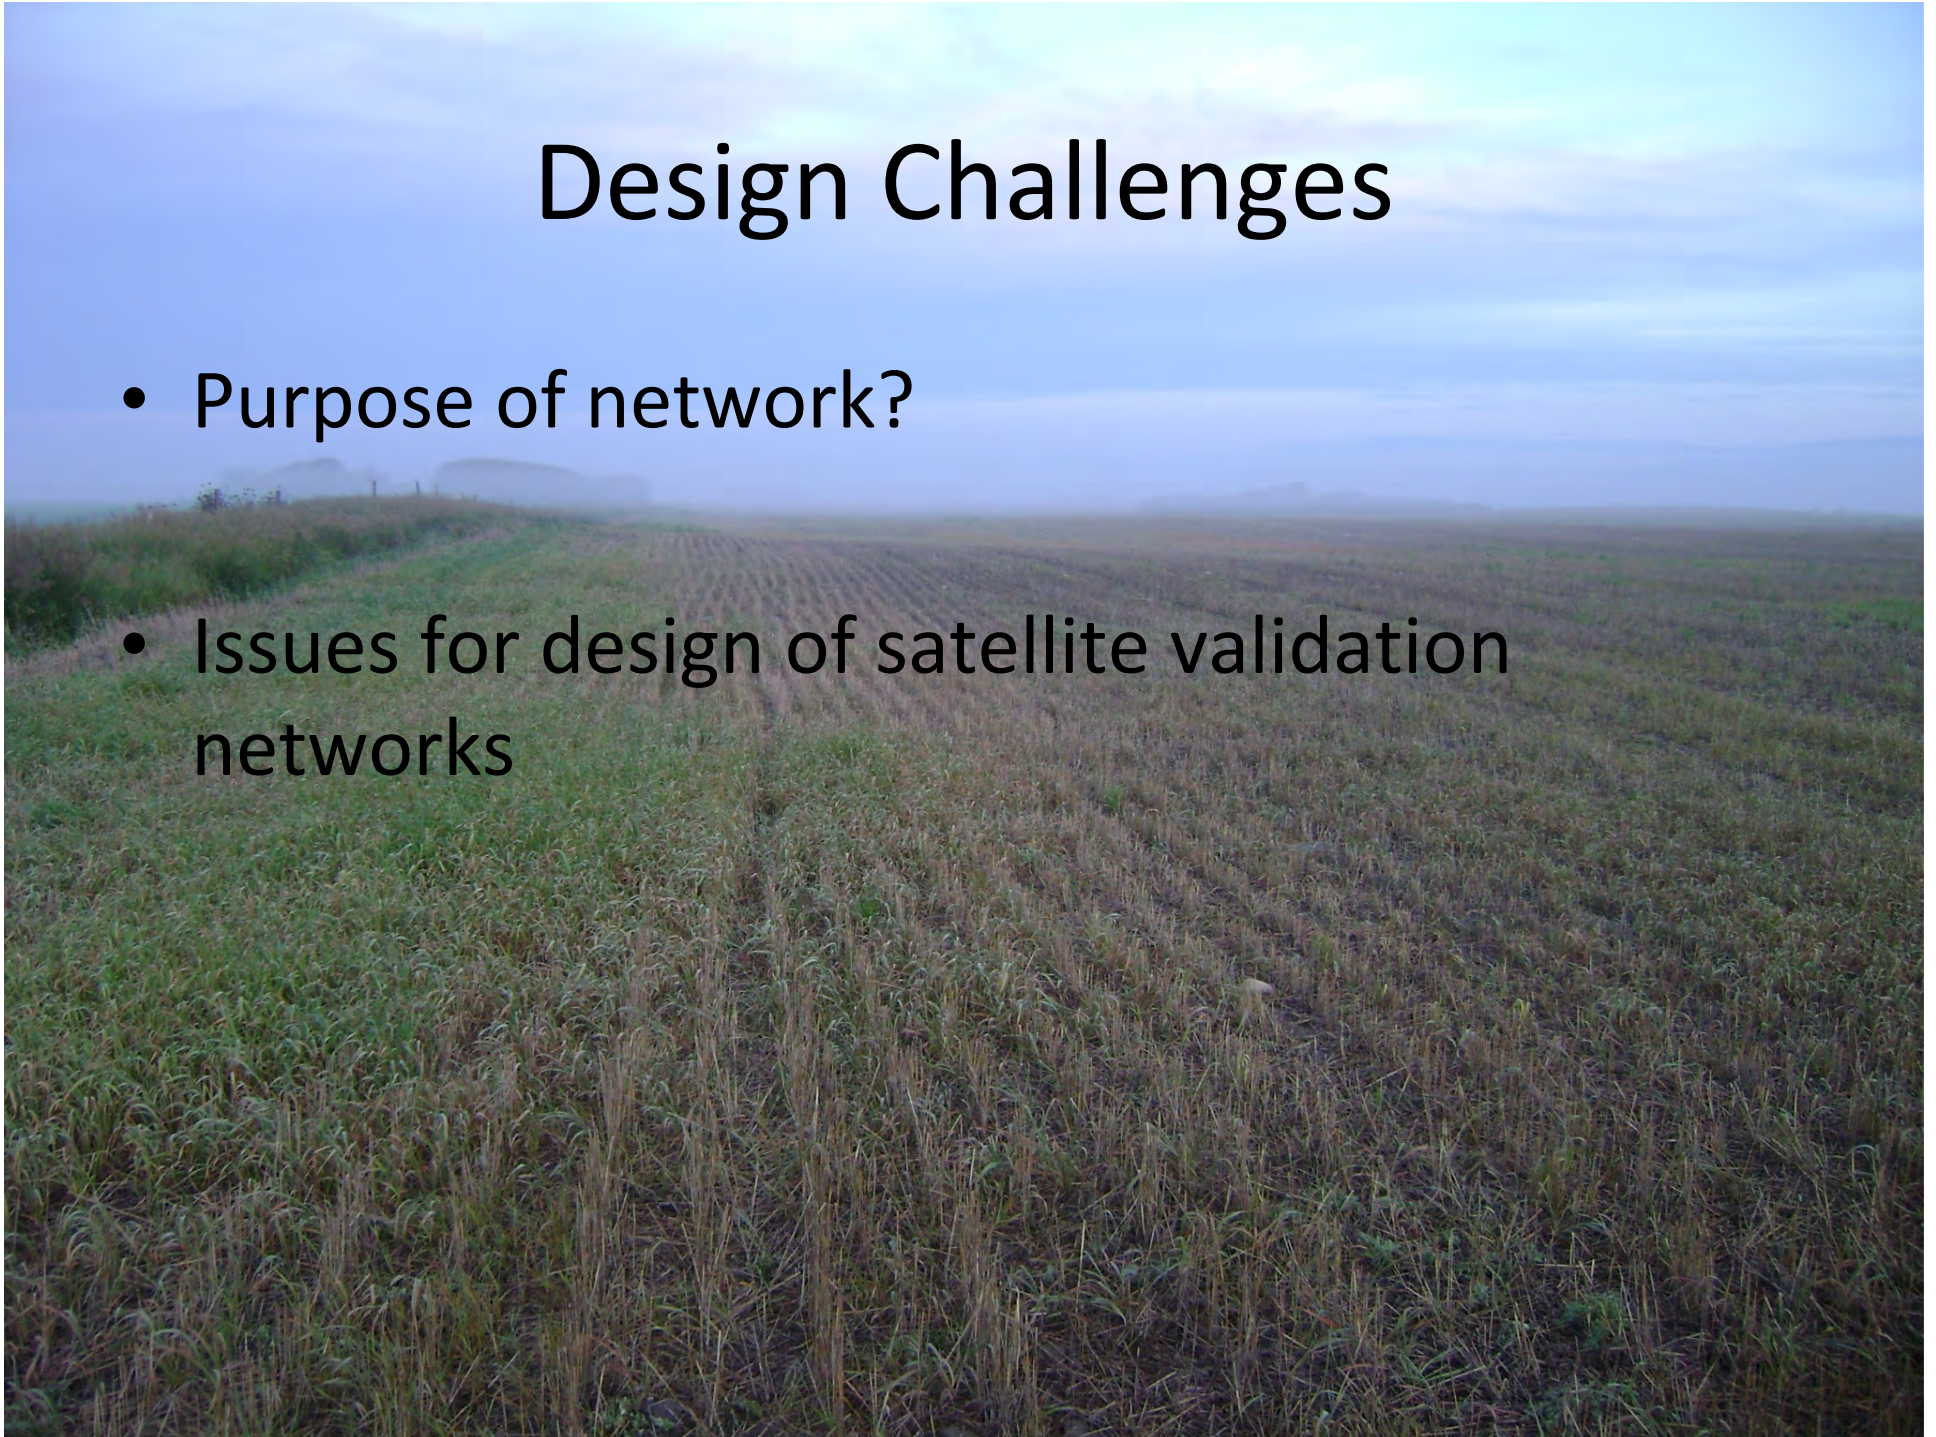

Data Sources:

Agricorp (2006)
Ontario Ministry of Natural Resources (2005)
Ontario Ministry of Agriculture, Food and
Rural Affairs (2004)

Design Challenges

- Purpose of network?
- Issues for design of satellite validation networks

Development of Paired Soil Moisture Sampling Networks for Satellite and Model Validation

How Many Sensors?

How representative are the network measurements compared to field conditions?

Impact of Sensor Orientation?

Impact of Land-use Practices: Tillage

Impacts of Land-use Practices:

Tillage

Difference in Mean Volumetric Water Content in Tilled and Non-Tilled Soils Over Time

Difference in the Coefficient of Variation for Volumetric Water Content in Tilled and Non-Tilled Soils Over Time

Impact of crop cover on mean soil moisture and variability

Applications of Soil Moisture Monitoring Networks

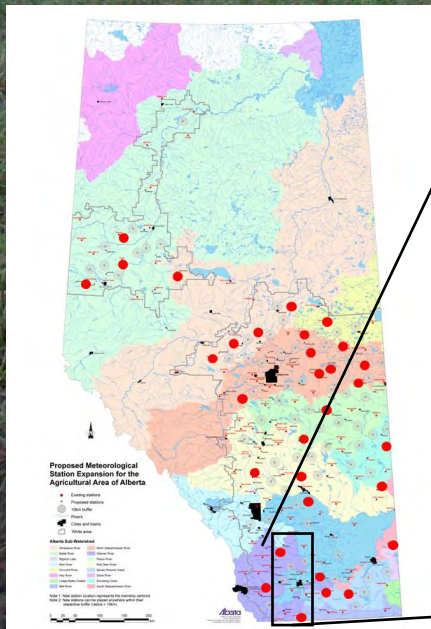

- Controls on soil moisture variability
- Evaluation of remote sensing soil moisture products
- Evaluation of data assimilation products and methods

Soil Moisture and Variability Time Series

Controls on soil moisture variability in Alberta. Correlation of physical processes to the first Principal Component (47% of variability) for the Alberta Drought Monitoring Network and CLASS

Validation of Soil Moisture Estimate from Microwave Brightness Temperatures

Correlations of satellite derived soil moisture to network observations

ONT	LPRM C/X-Band		NSIDC X-Band		SSM/I	
	R	Anomaly RMSE (%)	R	Anomaly RMSE (%)	R	Anomaly RMSE (%)
All	0.54	0.91	-0.06	1.25	0.44	1.01
MJ	0.80	0.99	0.57	1.53	0.54	1.20
JA	0.79	0.77	0.31	0.93	0.63	0.82
SO	0.70	1.00	-0.57	1.25	0.25	1.05
SASK						
All	0.08	1.34	-0.04	1.38	0.02	1.54
MJ	0.71	1.65	-0.28	1.28	0.29	1.98
JA	-0.18	1.57	0.82	1.16	0.11	1.67
SO	0.23	1.27	0.11	1.81	0.02	1.62

Table 7. Relationship between in-situ and satellite derived soil moisture for 2007 and 2008 growing seasons. In-situ soil moisture is the weekly average of all available soil moisture stations within each study area. The LPRM soil moisture is derived from C-band with X-band substituted where RFI is detected, the NSIDC is derived from X-band only. Anomalies represent standard normal deviates. Values in bold are significant at $p < 0.05$.

Improving soil moisture retrievals of the LPRM through parameter adjustment

	Measure	Jul 27 2007 - Oct 31 2007	May 1 2008 - Jun 23 2008	Aug 21 2008 - Oct 28 2008	Overall
Asc6.9	Bias	0.0535	-0.0174	0.0275	0.0172
	RMSE	0.0621	0.0484	0.0394	0.0486
	d	0.9832	0.9904	0.9920	0.9893
	R	0.2024	0.2307	0.7328	0.3261
Desc6.9	Bias	0.0741	-0.0016	0.0406	0.0330
	RMSE	0.0833	0.0374	0.0597	0.0595
	d	0.9723	0.9947	0.9827	0.9850
	R	0.2500	0.6669	0.4769	0.3976
LPRM-Asc	Bias	0.1025	0.0080	0.0839	0.0608
	RMSE	0.1110	0.0723	0.0890	0.0892
	d	0.9559	0.9808	0.9680	0.9699
	R	-0.0318	0.1741	0.7075	0.1301
LPRM-Desc	Bias	0.1181	0.0159	0.0808	0.0659
	RMSE	0.1352	0.0854	0.1335	0.1189

	R	0.1965	0.3318	-0.0505	0.0238
Note: d = degree of agreement, R = pairwise correlation coefficient.					

Use of Network data for evaluation of data assimilation approaches

	Measure	Overall
LPRM(Des6.9)	Bias	0.0173
	RMSE	0.0483
	d	0.9894
	R	0.3279
CLASS Default	Bias	0.0347
	RMSE	0.0531
	d	0.9880
	R	0.1714
Assimilated	Bias	0.0105
	RMSE	0.0373
	d	0.9935
	R	0.5618

RADARSAT-2 Validation Field Campaign near Saskatoon, Saskatchewan, July, 2008

Sampling Data Set:

- vegetation cover, water content, height and density.
- Surface roughness
- soil properties
- 6000+ observations of surface soil moisture and temperature were obtained over a 20x20km region.

Canadian SMOS Validation Campaign 2010

- Time: May-June 2010
- Locations: Boreal Forest and Agricultural Regions of Saskatchewan
- Support: NSERC (~500K), Environment Canada in kind contributions
- Ground Support: Nested monitoring networks and BERMS; vegetation and soil moisture measurement teams
- Aircraft Support: Environment Canada (Anne Walker)
